SUBJECT INDEX, VOLUME XXVII

Acids, aliphatic, reactivity ratios of vinyl esters of, 39
Acrylic acid, copolymers with styrene, 441
Addition polymers, degradation by ultrasonic waves, 473
Adhesion, fundamental investigation, 59
Alfin polybutadiene, light scattering, 349
Allyl chloride, diffusion in polyvinyl acetate, 391, 405
Apparent viscosity, influence of rate of shear on, 549
Block copolymer, styrene-methyl methacrylate, 580
Cation exchange resins, 587
Cellulose I, polarized infrared spectra, 595
Cellulose derivatives, intrinsic viscosities, 231
thermodynamic porperties, 459
Chain scissions, calculation in photochemical degradation, 83
Chromatographic adsorption, polystyrene, 149
Crosslink density, polybutadiene, 115
Crosslinked polymers, viscoelasticity, 255
Crosslinking, of polyvinyl chloride by ultraviolet irradiation, 597
of rubber by radiation, 503
Crystalline recovery, quenched polyethylene, 75
Crystallinity, effect on sorption of moisture by polymers, 313
silicone rubber, 1, 19
Deactivating effect, mechanism of protection by, 529
Degradation, addition polymers by ultrasonic waves, 473
photochemical, calculation of chain scissions in, 83
thermal, of polymethacrylonitrile, 207
Dextran, distribution function, 581
Dielectric properties, polymethyl methacrylate, 571
Electrical resistivity, change during isothermal polymerization, 199
Electrons, high energy, for vinyl stearate polymerization, 269
Ethyl cellulose, molecular weight, 129
sorption and diffusion compared to rubber, 177
Gelatin films, measuring shrinkage stress of, 59
Gel-sol analysis, simple method of, 559
Infrared spectra, amylose-iodine complex, 481
polarized, of cellulose I, 595
polystyrene, 241
Intrinsic viscosities, cellulose derivatives, 231
Intrinsic viscosity-molecular weight equation, determination of constants in, 433
Irradiation effects, Plexiglas, 135
Isotactic polymers, dimensions, 573
Isothermal polymerization, and change in electrical resistivity, 199
Light scattering, alfin polybutadiene, 349
for molecular weight determination, 575
by polymer solutions, 219
polyvinyl bromide, 167
from thin polymer films, 87
Methyl methacrylate, block copolymer with styrene, 580
Molecular weight, ethyl cellulose, 129
Molecular weight determination, by light scattering, 575
Molecular weight-intrinsic viscosity equation, determination of constants in, 433
Nuclear spin resonance line width, polyethylene, 67
Nylon 6, stress relaxation, 335
Orientation, silicone rubber, 1, 19
Osmotic determinations, 591
Particle size, determination by Tyndall spectra, 591
Phosphoric acid, reactions with polyvinyl acetals, 285
Photochemical degradation, calculation of chain scissions in, 83
Plexiglas, irradiation effects, 135
Polybutadiene, crosslink density, 115
Polyelectrolytes, dimensions, 573
Polyethylene, birefringence of films, 567
nuclear spin resonance line width, 67
quenched, crystalline recovery, 75
refractivity, 561
Polyethylene terephthalate, cold-drawing, 563
Polymethacrylonitrile, thermal degradation, 207
Poly-2,4-methylenetetralone, preparation, 441
Polymethyl methacrylate, dielectric properties, 571
Polystyrene, chromatographic adsorption, 149
infrared spectra, 241
Polytetrafluoroethylene, low temperature transition, 555
Polyvinyl acetals, reactions with phosphoric acid, 285
Polyvinyl acetate, diffusion of allyl chloride in, 391, 405
Polyvinyl bromide, light scattering and viscosity, 167
Polyvinyl chloride, crosslinking by ultraviolet irradiation, 597
Poly-4-vinylpyridine, quaternization rate, 569
Propylene oxide, polymerization with triethylaluminum, 584
Radiation, for crosslinking of rubber, 503
Reactivity ratios, aliphatic acids of vinyl esters, 39

Rubber, hydroxylated polyolefin, monolayer studies of, 489
radiation crosslinking, 503
silicone, physical measurements of crystallinity and orientation, 19
silicone, x-ray studies of crystallinity and orientation, 1
sorption and diffusion compared to ethyl cellulose, 177
Shear, influence of rate on apparent viscosity of polymer solutions, 549
Silicic acid, polymerization, 523
Silicone resin, determination, 560
Silicone rubber, physical measurements of crystallinity and orientation, 19
x-ray studies of crystallinity and orientation, 1
Sodium ethylenesulfonate, polymers and copolymers, 295
Sol-gel analysis, simple method of, 559
Starches, physicochemical studies, 481
Straining, in high polymer solids, 419
Stress relaxation, nylon 6, 335
Styrene, block copolymer with methyl methacrylate, 580
copolymers with acrylic acid, 441
Syndiotactic polymers, dimensions, 573
Thermodynamic properties, cellulose derivatives, 459
Triallyl cyanurate, polymerization, 515
N,N,N - Triethyl - *N* - [2 - (methacryloxy) ethyl]ammonium iodide, copolymerization with 4-vinylpyridine, 381
Ultrasonic waves, for degradation of addition polymers, 473
Ultraviolet irradiation, for crosslinking of polyvinyl chloride, 597
Vinyl acetate, x-ray diffraction pattern with vinyl cyanide, 145
Vinylene carbonate, copolymerization, 275
Vinyl cyanide, x-ray diffraction pattern with vinyl acetate, 145
Vinylene carbonate, copolymerization with vinyl thiolacetate, 381
Vinyl esters, reacticity ratios, 39
Vinyl monomers, reactivity ratios, 39
4-Vinylpyridine, copolymerization with *N,N,N* - triethyl - *N* - [2 -(methacryloxy)ethyl]ammonium iodide, 381
Vinyl stearate, polymerization by high energy electrons, 269
Vinyl thiolacetate, copolymerization with vinylene carbonate, 381
Viscoelasticity, crosslinked polymers, 255
Viscosity, polyvinyl bromide, 167
X-ray diffraction pattern, vinyl cyanide-vinyl acetate, 145
X-ray studies, silicone rubber, 1
